'Other' includes children going to Madarsa or EGS.

'Not in school' includes children who never enrolled or have dropped out.

The proportion of children going to private school often varies by grade. There are also changes over time. For example, in 2018 private school enrollment in Std II is 55.1% as compared to 39.6% in Std VIII.

Each line shows trends in the proportion of children not enrolled in school for a particular subset of children. For example, the proportion of girls (age 15-16) not enrolled in school was 1.1% in 2006, 0.7% in 2012, and 0.6% in 2018.

Reading

ASER learning assessments are conducted in the household. Children in the age group 5-16 are assessed. Assessments are conducted in 19 languages across the country. The type of school in which children are enrolled (government or private) is also recorded.

	Table 4: % Children by grade and reading level All children 2018

VIII	0.3	1.2	2.4	6.5	89.6	100					

The reading tool is a progressive tool. Each row shows the variation in children's reading levels within a given grade. For example, among children in Std III, 0.7% cannot even read letters, 9.7% can read letters but not words or higher, 19.7% can read words but not Std I level text or higher, 17.4% can read Std I level text but not Std II level text, and 52.5% can read Std II level text. For each grade, the total of these exclusive categories is 100%.

Table 5: Trends over time Reading in Std III by school type 2012, 2014, 2016 and 2018

2016	38.0	51.5	45.7					
2018	43.8	60.2	52.2					

The highest level in the ASER reading assessment is a Std II level text. Table 5 shows the proportion of children in Std III who can read Std II level text. This figure is a proxy for "grade level" reading for Std III. Data for children enrolled in government schools and private schools is shown separately.

\* This is the weighted average for children in government and private schools only.

This graph shows the progress of four cohorts from Std IV to Std VIII. For example, the first cohort was in Std IV in 2008, in Std VI in 2010, and in Std VIII in 2012. For this cohort, % children who could read Std II level text in Std IV (in 2008) was 63.1% and in Std VI (in 2010) was 82.9%. When the cohort reached Std VIII in 2012, this figure was 84.3%. The progress of each of these cohorts can be understood in the same way.

### Arithmetic

ASER learning assessments are conducted in the household. Children in the age group 5-16 are assessed. Assessments are conducted in 19 languages across the country. The type of school in which children are enrolled (government or private) is also recorded.

Table 7: % Children by grade and arithmetic levelAll children 2018

VIII	0.3	0.0	21.2	26.7	51.8	100			

The arithmetic tool is a progressive tool. Each row shows the variation in children's arithmetic levels within a given grade. For example, among children in Std III, 0.8% cannot even recognize numbers 1-9, 3.1% can recognize numbers up to 9 but cannot recognize numbers up to 99 or higher, 48.2% can recognize numbers up to 99 but cannot do subtraction, 42.7% can do subtraction but cannot do division, and 5.2% can do division. For each grade, the total of these exclusive categories is 100%.

In most states, children are expected to do 2-digit by 2-digit subtraction with borrowing by Std II. Table 8 shows the proportion of children in Std III who can do subtraction. This figure is a proxy for "grade level" arithmetic for Std III. Data for children enrolled in government schools and private schools is shown separately.

### **Beyond basics**

These questions were asked only to children in the age group 14-16. For each task, the surveyor showed the visual and read out the question to the child. The exact answer given by the child was recorded. The results are reported only for those children who were able to do at least subtraction correctly.
