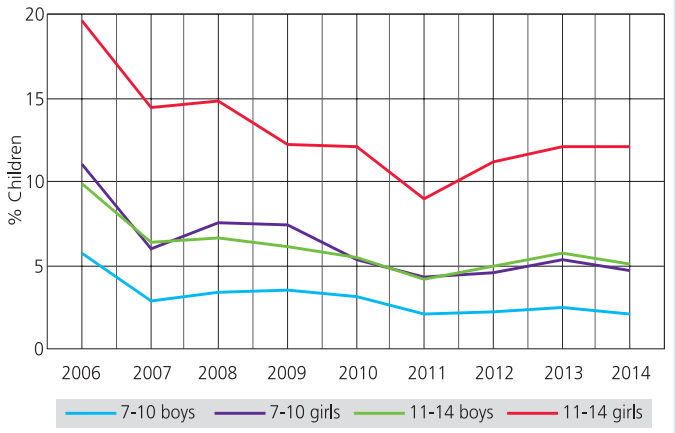
'Not in school' = dropped out + never enrolled

Chart 1: Trends over time
% Children out of school by age group and gender 2006-2014



Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was 19.6% in 2006, 12.2% in 2009, 8.9% in 2011 and 12.1% in 2014.

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, 34.3% children are 8 years old but there are also 22.3% who are 7, 14.4% who are 9, 11.1% who are 10 and 7% who are older.

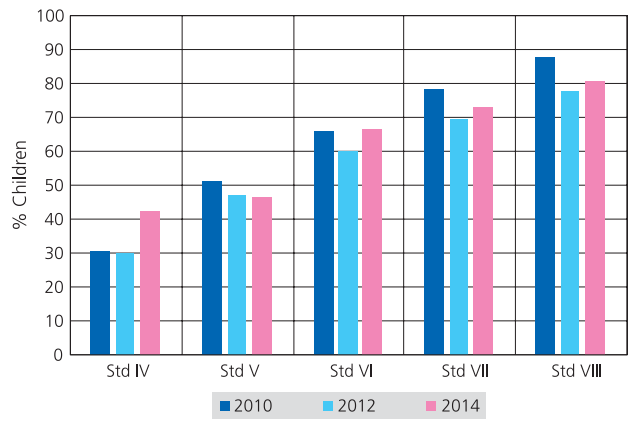
Chart 4: Trends over time
% Children who can READ Std II level text by class
All schools 2010, 2012 and 2014



To interpret the chart at left (Chart 4), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.

Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.

However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

Total	13.6	23.0	25.4	17.1	21.0	100

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 10.8% children cannot even recognize numbers 1-9, 36.8% can recognize numbers up to 9 but not more, 30.9% can recognize numbers up to 99 but cannot do subtraction, 15.3% can do subtraction but cannot do division, and 6.2% can do division. For each class, the total of all these exclusive categories is 100%.

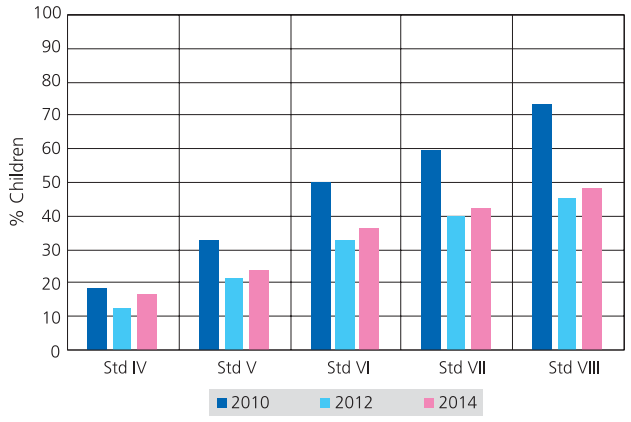
Chart 5: Trends over time
% Children who can do DIVISION by class
All schools 2010, 2012 and 2014



To interpret the chart at left (Chart 5), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.

Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.

However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

Note for Table 18 & 19: Grant information was not collected in ASER 2013.

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

Name of Grant	Type of activity
School Maintenance Grant	For minor repairs and infrastructure maintenance. Eg. Repair of toilet, boundary wall, whitewashing
School Development Grant	For purchasing school and office equipment. Eg. Blackboards, sitting mats, chalks, duster
Teacher Learning Material Grant*	For purchasing teaching aids

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.
