Note: 'Other' includes children going to madarsa and EGS.
 'Not in school' = dropped out + never enrolled.

**Chart 1: Trends over time
 % Children out of school by age group and gender 2006-2013**

How to read this chart: Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was 17.6% in 2006, 4.6% in 2010, 5.2% in 2012 and is 4.6% in 2013.

VIII	6.0									19.0	27.3	29.1	12.3	6.4	100

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, 33.2% children are 8 years old but there are also 12.7% who are 7, 19% who are 9, 18% who are 10 and 10.8% who are older.

कहानी
 सावन का महीना था। आसमान में बहुत से काले बादल छाये थे। ठंडी-ठंडी हवा चल रही थी। मैंने सोचा, आज झूला झूलते हैं। बड़े भैया एक मोटी सी रस्सी लेकर आये। हमने उसे पेड़ से लटका कर झूला बनाया। सब ने मिलकर खूब झूला झूला। बहुत सारे बच्चे आकर मजे से खेलने लगे। खेलते-खेलते रात हो गयी।

To interpret the chart alongside (Chart 4), several things need to be kept in mind:

The highest level in the ASER reading tool is the ability to read a Std II level text. ASER is a "floor" level test. All children (age 5 to 16) are assessed using the same tool; grade-level tools are not used in ASER.

We can see that the proportion of children who can read at least Std II level text increases in successive standards. This is true for every year for which data is shown.

By Std VIII, when children have completed eight years of schooling, a high proportion of children are able to read the Std II level text. It is possible that many children in Std VIII are reading at higher levels, but ASER reading tests do not assess higher than Std II level.

This chart allows us to compare proportions of children reading at least Std II level texts in different standards across years. For example, see Std V in 2009, 2011 and 2013.

Data has not been presented where sample size was insufficient.

Total	16.0	21.8	20.1	15.2	26.9	100

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 13.4% children cannot even recognize numbers 1-9, 32.4% can recognize numbers up to 9 but not more, 26.7% can recognize numbers up to 99 but cannot do subtraction, 14.9% can do subtraction but cannot do division, and 12.7% can do division. For each class, the total of all these exclusive categories is 100%.

Chart 5: Trends over time
 % Children who can do DIVISION by class
 All schools 2009, 2011 and 2013

To interpret the chart alongside (Chart 5), several things need to be kept in mind:

The highest level in the ASER arithmetic tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER does not assess children using grade-level tools.

We can see that the proportion of children who can do this level of division increases in successive standards. This is true for every year for which data is shown.

By Std VIII, when children have completed eight years of schooling, a substantial proportion of children are able to do division problems at this level. It is possible that some children are able to do operations at higher levels too, but ASER arithmetic tests do not assess higher than this level.

This chart allows us to compare proportions of children who can do division in different standards across years. For example, see Std V in 2009, 2011 and 2013.

Data has not been presented where sample size was insufficient.

Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.
