#### School enrollment and out of school children

Table 1: % Children in different types of schools 2013										
Age group	Govt.	Pvt.	Other	Not in school	Total					
Age: 6-14 ALL	91.7	6.7	0.6	1.1	100					
Age: 7-16 ALL	92.0	5.3	0.7	2.0	100					
Age: 7-10 ALL	90.9	7.9	0.6	0.6	100					
Age: 7-10 BOYS	89.0	9.6	0.7	0.7	100					
Age: 7-10 GIRLS	92.7	6.3	0.5	0.6	100					
Age: 11-14 ALL	94.2	3.5	0.7	1.7	100					
Age: 11-14 BOYS	93.0	3.6	1.1	2.3	100					
Age: 11-14 GIRLS	95.3	3.4	0.2	1.1	100					
Age: 15-16 ALL	89.9	3.5	1.1	5.5	100					
Age: 15-16 BOYS	86.5	5.2	1.4	6.9	100					
Age: 15-16 GIRLS	93.1	1.9	0.8	4.2	100					

Note: 'Other' includes children going to madarsa and EGS.

'Not in school' = dropped out + never enrolled.

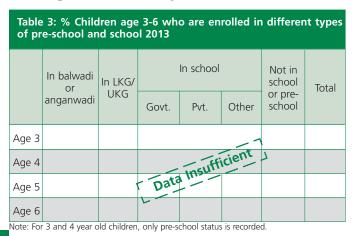

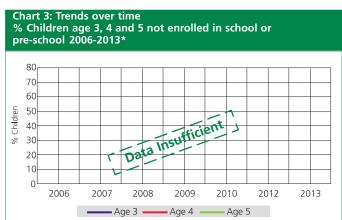

How to read this chart: Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was 7.3% in 2006, 3.4% in 2010, 1.5% in 2012 and is 1.1% in 2013.

	Table 2: Sample description % Children in each class by age 2013												
Std	5	6	7	8	9	10	11	12	13	14	15	16	Total
1	9.0	42.8	41.2	5.6				1.	4				100
Ш	5.1	4.4	25.7	56.6	6.2				1.9				100
III		1.6		20.5	62.1	62.1 11.4 4.4				100			
IV		4.	.5		16.4	68.5			10	.6			100
V			1.3			20.1	63.3	12.3		3	.1		100

VIII				4	.7				15.7	63.9	13.1	2.7	100

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, 20.5% children are 8 years old but there are also 62.1% who are 9, 11.4% who are 10 and 4.4% who are older.

### Young children in pre-school and school

VIII	0.6	0.9	11.9	22.8	63.8	100					
Total	7.0	17.1	24.0	20.8	31.2	100					

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 7.8% children cannot even read letters, 21.8% can read letters but not more, 34.3% can read words but not Std I level text or higher, 23.6% can read Std I level text but not Std II level text, and 12.5% can read Std II level text. For each class, the total of all these exclusive categories is 100%.

To interpret the chart alongside (Chart 4), several things need to be kept in mind:

The highest level in the ASER reading tool is the ability to read a Std II level text. ASER is a "floor" level test. All children (age 5 to 16) are assessed using the same tool; grade-level tools are not used in ASER.

We can see that the proportion of children who can read at least Std II level text increases in successive standards. This is true for every year for which data is shown.

By Std VIII, when children have completed eight years of schooling, a high proportion of children are able to read the Std II level text. It is possible that many children in Std VIII are reading at higher levels, but ASER reading tests do not assess higher than Std II level.

This chart allows us to compare proportions of children reading at least Std II level texts in different standards across years. For example, see Std V in 2009, 2011 and 2013.

#### **Arithmetic**

	Table 6: % Children by class and ARITHMETIC level All schools 2013

VIII	0.0	2.6	26.7	36.6	34.1	100					
Total	4.4	18.6	37.1	24.5	15.5	100					

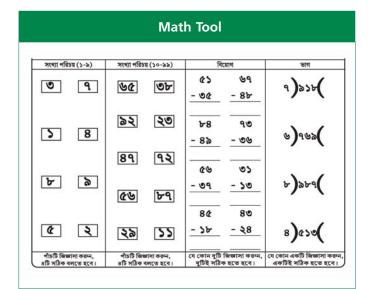

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 4.8% children cannot even recognize numbers 1-9, 20.6% can recognize numbers up to 9 but not more, 45.6% can recognize numbers up to 99 but cannot do subtraction, 23.2% can do subtraction but cannot do division, and 5.9% can do division. For each class, the total of all these exclusive categories is 100%.

Table 7: Trends over time
% Children in Std III and V who can do at least SUBTRACTION
and DIVISION respectively by school type 2009-2013

Year				n in Std V do division
Govt.		Govt. & Pvt.*	Govt.	Govt. & Pvt.*
2009	43.3	44.3	23.2	24.2

2011	52.9	53.9	37.8	37.8
2012	28.0	29.6	20.5	20.8
2013	29.4	29.5	26.1	26.4

<sup>\*</sup> This is the weighted average of govt. and pvt. schools only.

To interpret the chart alongside (Chart 5), several things need to be kept in mind:

The highest level in the ASER arithmetic tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER does not assess children using grade-level tools.

We can see that the proportion of children who can do this level of division increases in successive standards. This is true for every year for which data is shown

By Std VIII, when children have completed eight years of schooling, a substantial proportion of children are able to do division problems at this level. It is possible that some children are able to do operations at higher levels too, but ASER arithmetic tests do not assess higher than this level.

This chart allows us to compare proportions of children who can do division in different standards across years. For example, see Std V in 2009, 2011 and 2013.

### Type of school and paid additional tuition classes (tutoring)

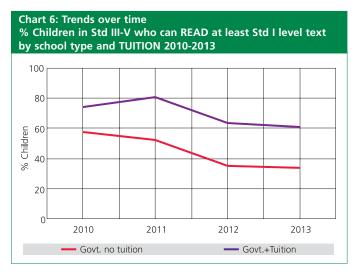

The ASER survey recorded information about paid additional private tutoring by asking the following question: "Does the child take any paid tuition class currently?" Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

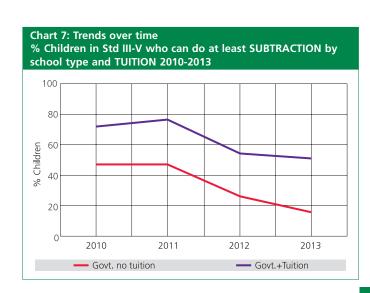

Table 8: Trends over time % Children attending PAID TUITION CLASSES by school type 2010-2013

#### School observations

In each sampled village, the largest government school with primary sections is visited on the day of the survey. Information about schools in this report is based on these visits.
