<tr>
<td>Total</td>
<td>11.2</td>
<td>14.3</td>
<td>22.0</td>
<td>23.3</td>
<td>29.3</td>
<td>100</td>
</tr>
</tbody>
</table>

How to read this table: Each cell shows the highest level in reading achieved by a child. For example, in Std III, 8.9% children cannot even read letters, 21.4% can read letters but not more, 40.7% can read words but not Std I text or higher, 21.1% can read Std I text but not Std II text, and 7.9% can read Std II text. For each class, the total of all these exclusive categories is 100%.

Table 5: Trends over time
% Children in Std III and V at different READING levels by school type 2009-2013

<table>
<thead>
<tr>
<th>Year</th>
<th>% Children in Std III who can read at least Std I level text</th>
<th>% Children in Std V who can read Std II level text</th>
</tr>
</thead>
<tbody>
<tr>
<td>2009</td>
<td>27.3</td>
<td>33.8</td>
</tr>

<td>30.1</td>
</tr>
<tr>
<td>2012</td>
<td>31.2</td>
<td>29.5</td>
</tr>
<tr>
<td>2013</td>
<td>30.7</td>
<td>25.1</td>
</tr>
</tbody>
</table>

* This is the weighted average of govt. and pvt. schools only.

To interpret the chart alongside (Chart 4), several things need to be kept in mind:

The highest level in the ASER reading tool is the ability to read a Std II level text. ASER is a “floor” level test. All children (age 5 to 16) are assessed using the same tool, grade-level tools are not used in ASER.

We can see that the proportion of children who can read at least Std II level text increases in successive standards. This is true for every year for which data is shown.

By Std VIII, when children have completed eight years of schooling, a high proportion of children are able to read the Std II level text. It is possible that many children in Std VIII are reading at higher levels, but ASER reading tests do not assess higher than Std II level.

This chart allows us to compare proportions of children reading at least Std II level texts in different standards across years. For example, see Std V in 2009, 2011 and 2013.
Data has not been presented where sample size was insufficient.

### Arithmetic

#### Table 6: % Children by class and ARITHMETIC level

**All schools 2013**

<table>
<thead>
<tr>

</tr>
<tr>
<td>Total</td>
<td>7.9</td>
<td>12.3</td>
<td>38.0</td>
<td>27.4</td>
<td>14.3</td>
</tr>
</tbody>
</table>

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, 4.3% children cannot even recognize numbers 1-9, 16.1% can recognize numbers up to 9 but not more, 61.1% can recognize numbers up to 99 but cannot do subtraction, 17.8% can do subtraction but cannot do division, and 0.7% can do division. For each class, the total of all these exclusive categories is 100%.

#### Table 7: Trends over time

**% Children in Std III and V who can do at least SUBTRACTION and DIVISION respectively by school type 2009-2013**

<table>
<thead>
<tr>
<th>Year</th>
<th>% Children in Std III who can do at least subtraction</th>
<th>% Children in Std V who can do division</th>
</tr>
</thead>

<tr>
<td>2012</td>
<td>14.4</td>
<td>23.6</td>
</tr>
<tr>
<td>2013</td>
<td>17.9</td>
<td>19.9</td>
</tr>
</tbody>
</table>

* This is the weighted average of gov't. and pvt. schools only.

#### Chart 5: Trends over time

**% Children who can do DIVISION by class**

*All schools 2009, 2011 and 2013*

To interpret the chart alongside (Chart 5), several things need to be kept in mind:

The highest level in the ASER arithmetic tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER does not assess children using grade-level tools.

We can see that the proportion of children who can do this level of division increases in successive standards. This is true for every year for which data is shown.

By Std VII, when children have completed eight years of schooling, a substantial proportion of children are able to do division problems at this level. It is possible that some children are able to do operations at higher levels too, but ASER arithmetic tests do not assess higher than this level.

This chart allows us to compare proportions of children who can do division in different standards across years. For example, see Std V in 2009, 2011 and 2013.
Type of school and paid additional tuition classes (tutoring)

The ASER survey recorded information about paid additional private tutoring by asking the following question: “Does the child take any paid tuition class currently?” Therefore the numbers given below do not include any unpaid supplemental help in learning that the child may have received.

Table 8: Trends over time
% Children attending PAID TUITION CLASSES by school type 2010-2013

RTE indicators

The Right of Children to Free and Compulsory Education (RTE) Act, 2009 specifies a series of norms and standards for a school. Data on selected measurable indicators of RTE are collected in ASER.

In each sampled village, the largest government school with primary sections is visited on the day of the survey. Information about schools in this report is based on these visits.

Table 11: Number of schools visited 2010-2013
