Note: 'Other' includes children going to madarsa and EGS. 'Not in school' = dropped out + never enrolled

Chart 2: Trends over time % Children enrolled in private schools in Std I-V and Std VI-VIII 2008, 2010, 2012 and 2014

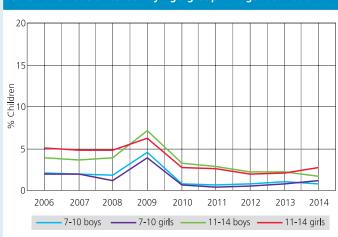

Young children in pre-school and school

Table 3: % Children age 3-6 who are enrolled in different types

of pre-school and school 2014 In school Not in In balwadi In LKG/ school Total UKG or preanganwadi school Govt. Pvt. Other 34.2 32.6 100 Age 3 Age 4 20.7 63.3 16.0 100 Age 5 7.7 32.4 23.6 32.3 0.0 3.9 100 Age 6 1.4 18.6 32.0 45.8 0.0 2.3 100

Note: For 3 and 4 year old children, only pre-school status is recorded.

Chart 1: Trends over time % Children out of school by age group and gender 2006-2014

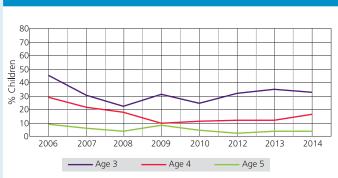

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was 5% in 2006, 6.2% in 2009, 2.6% in 2011 and 2.8% in 2014.

Table 2: Sample description % Children in each class by age 2014													
Std	5	6	7	8	9	10	11	12	13	14	15	16	Total
1	24.6	33.3	30.6	8.7		2.7					100		
II	4.5	16.2	36.1	31.0	9.1	1 3.2					100		
III	3.	.1	18.6	32.9	31.6	11.9	1.9			100			
IV		4.5		20.0	34.6	28.8	8.2		3	3.9			100
V		4	1.7		13.0	41.4	26.8	10.7		3.4	1		100
VI			2.9			17.9	32.0	31.0	11.9		4.3		100
VII		4.6 12.8 40.0					40.0	27.1	11.7	3.	9	100	
VIII				3.3				18.0	34.9	33.4	7.9	2.6	100

How to read this table: If a child started school in Std I at age 6, she should be of age 8 in Std III. This table shows the age distribution for each class. For example, in Std III, 32.9% children are 8 years old but there are also 18.6% who are 7, 31.6% who are 9, 11.9% who are 10 and 1.9% who are older.

Chart 3: Trends over time % Children age 3, 4 and 5 not enrolled in school or pre-school 2006-2014*

* Data for 2011 is not comparable to other years and therefore not included here

2012	71.4	81.5	75.5	69.5	73.5	71.2	
2013	68.8	77.0	72.4	66.5	69.9	67.8	
2014	67.8	81.2	74.5	60.9	73.8	66.6	

 $^{^{\}star}$ This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 4), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std II level texts or not.

Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std II level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.

However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std V in 2010, 2012 and 2014.

20	014	48.3	78.1	63.2	37.1	53.9	44.4

^{*} This is the weighted average for children in government and private schools only.

To interpret the chart at left (Chart 5), several things need to be kept in mind:

First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.

Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.

However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std V for cohorts that were in Std V in 2010, 2012 and 2014.
