Chart 1: Trends over time \% Children out of school by age group and gender 2006-2014

Each line shows trends in the proportion of children out of school for a particular subset of children. For example, the proportion of girls (age 11-14) not in school was $3.4 \%$ in 2006, $3 \%$ in 2009, $1.2 \%$ in 2011 and $1.7 \%$ in 2014.

To interpret the chart at left (Chart 4), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to read a Std II level text. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can read at least Std ॥ level texts or not.
Based on this tool, we can see that proportion of children who can read Std II level text increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a very high proportion of children are able to read text at least at Std ॥ level. This is true for every year for which data is shown. It is possible that some children are reading at higher levels too but ASER reading tests do not assess higher than Std II level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to read Std II level texts in Std V for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Data has not been presented where sample size was insufficient.

## Arithmetic

| Total | 8.0 | 19.0 | 30.3 | 18.7 | 24.0 | 100 |

How to read this table: Each cell shows the highest level in arithmetic achieved by a child. For example, in Std III, $8.1 \%$ children cannot even recognize numbers 1-9, $29.9 \%$ can recognize numbers up to 9 but not more, $32.8 \%$ can recognize numbers up to 99 but cannot do subtraction, $18.1 \%$ can do subtraction but cannot do division, and $11.2 \%$ can do division. For each class, the total of all these exclusive categories is $100 \%$.

To interpret the chart at left (Chart 5), several things need to be kept in mind:
First, in ASER, all children are assessed using the same tool. The highest level on this tool is the ability to do a numerical division problem (dividing a three digit number by a one digit number). In most states in India, children are expected to do such computations by Std III or Std IV. ASER is a "floor" level test. It does not assess children using grade level tools. At the highest level, what ASER can tell us is whether a child can do at least this kind of division problem.
Based on this tool, we can see that proportion of children who can do this level of division increases as they go to higher classes. By Std VIII children have completed eight years of schooling and by this stage a substantial proportion of children are able to do division problems at this level. This is true for every year for which data is shown. It is possible that some children are able to do operations at higher levels too but ASER arithmetic tests do not assess higher than this level.
However, what is also worth noting is how children at a given grade are doing in successive years. For example, this chart allows us to compare the proportion of children able to do division at this level in Std $V$ for cohorts that were in Std $V$ in 2010, 2012 and 2014.

Every year schools in India receive three financial grants. This is the only money over which schools have any expenditure discretion. Since 2009, ASER has been tracking whether this money reaches schools.

| Name of Grant | Type of activity |
| :--- | :--- |
| School <br> Maintenance <br> Grant | For minor repairs and <br> infrastructure maintenance. <br> Eg. Repair of toilet, <br> boundary wall, <br> whitewashing |
| School <br> Development <br> Grant | For purchasing school and <br> office equipment. <br> Eg. Blackboards, <br> sitting mats, chalks, duster |
| Teacher Learning <br> Material Grant* | For purchasing teaching aids |

* In 2013-14 and 2014-15 Government of India stopped sending money for this grant in most states.
